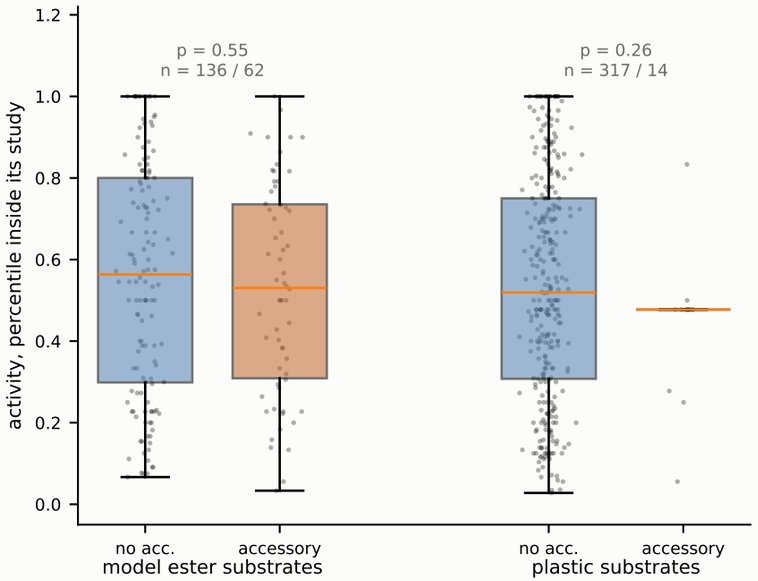
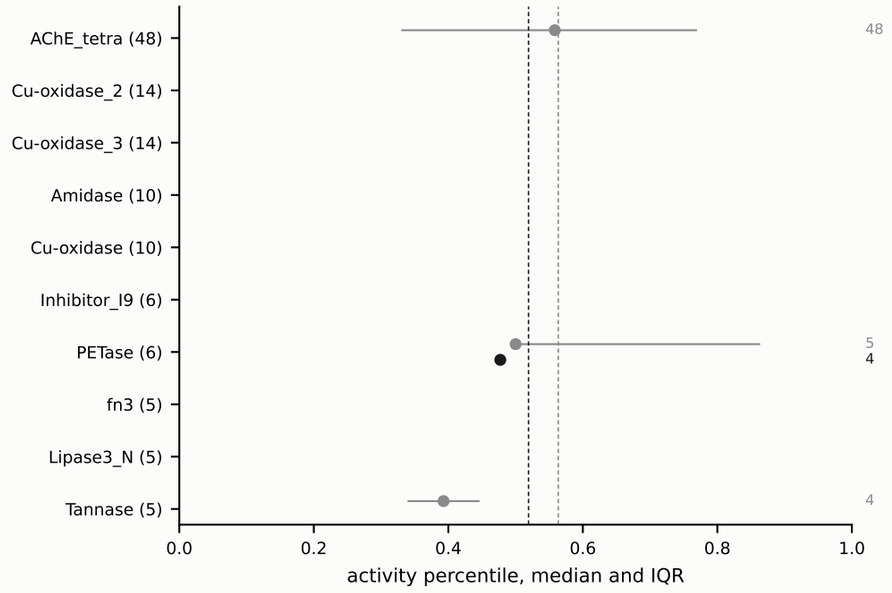
Probe: accessory domains and source metadata against measured activity (PETai labels)

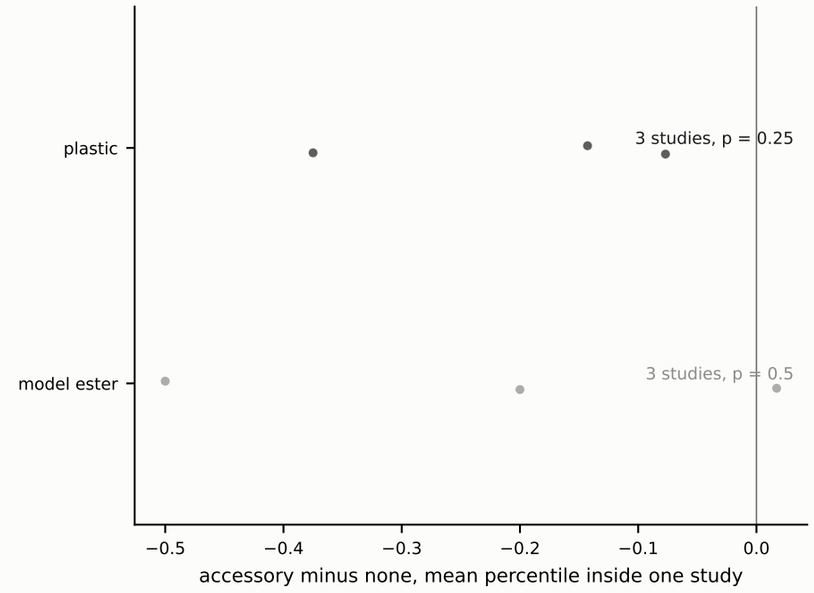
A Accessory domain present or not



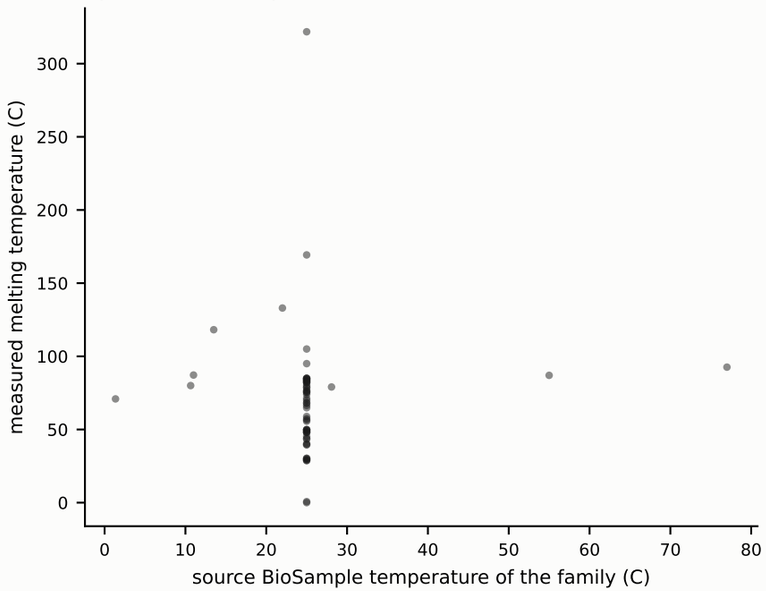
B Each accessory domain (black plastic, grey model ester)
dashed: sequences without accessory domains



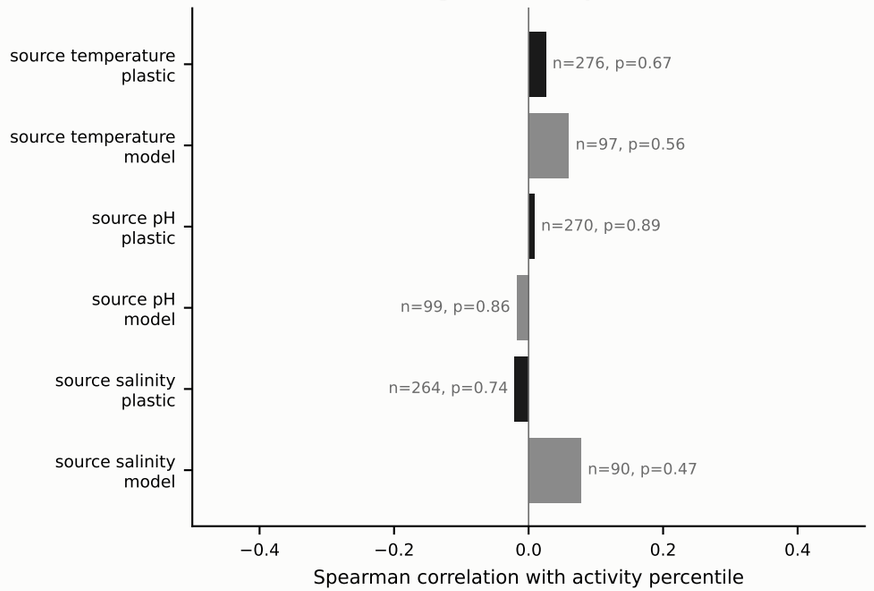
C Same comparison inside each study

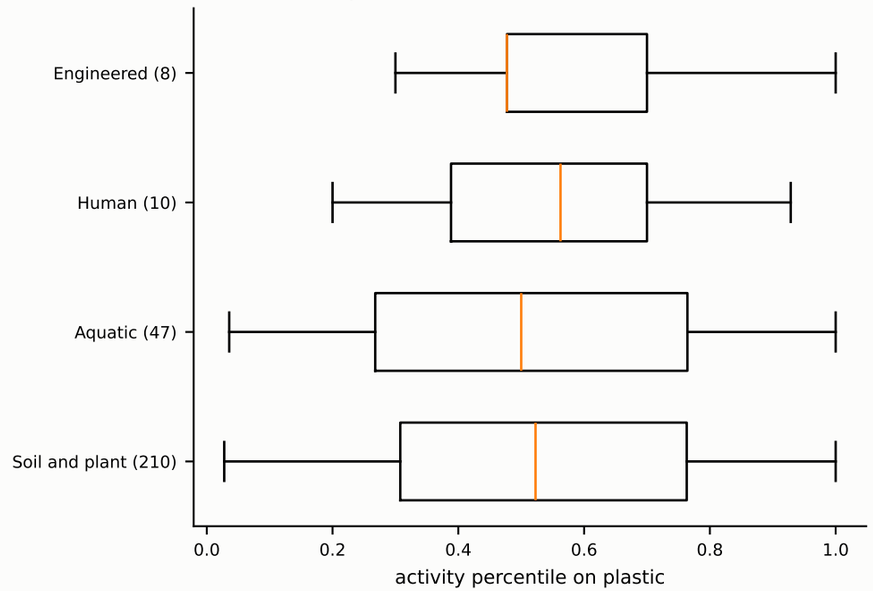


D Source temperature vs measured Tm
Spearman -0.08, p = 0.52, n = 63



E Source metadata against activity





F Ecosystem of the family, plastic activity
Kruskal-Wallis p = 0.9
